Group project:

Mock Charity Inventory website:

This project was created to demonstrate the relationship with webpages and databases. It uses MYSQL to store the given input that the webpage itself collect. The actual web page is built with FLASK a Python framework, and links with the customs MySQL account.

Built with: Python Flask, HTML & CSS, MySQL

Solo Projects

Heavenly Body JavaScript animation:

Using an external JS API, ii have created custom shapes and design and rendered them in 3d. The actual illustrations run on a JS Pseudo 3d engine, which enables human interaction. All custom shapes were designed and created in Adobe Illustrator and then converted to SVG paths to be used by the engine.

Built with: JS, HTML and CSS

Weather Web-Scraper:

This code runs on python and goes and collects information from external webpages and formats the gathers data into JSON format for future use. The web scraper will be used to collect weather forecast from an open source API and formats it into a more user-friendly weather forecast on a webpage built with FLASK.

Built with: Python, Flask, JSON

Skills

Web Design
Graphic Design

Program Languages

Java
JavaScript
React
HTML & CSS
Python

Adobe Creative Cloud:

Photoshop
Illustrator
InDesign

Education

Aurora University
exp 2021
BS Computer Science

Activities

Computer Science Club
